Reverse Osmosis works by using a high pressure pump to increase the pressure on the salt side of the RO and force the water across the semi-permeable RO membrane, leaving almost all (around 95% to 99%) of dissolved salts behind in the reject stream. The amount of pressure required depends on the salt concentration of the feed water.

The Puretec ROS2700 Series features continuous-flow water production operates on line pressure, which eliminates the need for an electrical booster pump in most applications. It uses water pressure to reverse a natural physical process called osmosis.

Puretec ROS2700 Continuous Flow RO System

Reverse osmosis is a process applied in desalination of water or purification of water. As the name implies, it is the process of osmosis in the reverse direction. A pressure that is greater than the natural osmotic pressure is applied to water and pushes water to pass through a semi-permeable membrane against the concentration gradient.
